Safety Reports / Procore Integration

Procore is the construction industry's leading construction management software that integrates with the Safety Reports Inspection App.

Construction companies can use Procore to manage all phases and aspects of projects, from pre-development and bidding to project completion.

Safety Reports' integration with Procore includes:

1. The ability to access your Procore jobs and pull them directly into the Safety Reports database. We pull in your site contacts, responsible parties (vendors/sub-contractors), job number and more! This means you only set up the project once, in Procore, and it will be available to you and your team when using our inspection app.

2. When using our app to submit your inspection reports, they will automatically upload to Procore's job folders. This allows you and your team to stay on top of, and react to, important safety inspection data in a timely manner. We don't just upload your inspections reports, but also your Corrective Action Tracking Reports, Top 10 Lists and more!

The process is simple and effortless! And the best part, it is included with your Safety Reports subscription!
