### Inspection App V10.0

Our Safety Inspection App update version 10.0 has been released. If you haven't updated your device to the latest version, we encourage you to do so.

[Apple Store](#) | [Google Play](#)

Following is a brief summary of the changes that come with this latest version:

1. We added an option to identify your "notes" that accompany your observations as *important* so they'll be highlighted when you submit your reports. [View Example](#)
2. We changed the "Classic Negative Only" report template so that all negative observations will be displayed with a red font in the body of the report to match up with our Classic Report template.
3. We made a change to the app so that when inspections are "repeated", the same cc's are pre-selected as the last time the report was sent.

Other more subtle changes were added with this update to further improve the performance of the app.

### Voice Dictation

Some of us avoid adding notes to our reports because it takes too long to type them out.

However, if you use the voice dictation feature that comes with both Apple and Android devices, the task becomes much simpler!

To enter text when using any of our apps, just tap in the text field and your keyboard will open. Next, tap the microphone icon next to the spacebar in the keyboard. Then, just speak and your device will convert what you say to text.

To add punctuation, such as commas, periods, exclamation points, etc., you will need to speak them as you dictate. For example, if you'd like to type "Please fix ASAP!", you'd need to speak the words "Please fix ASAP exclamation point."

If you're not using dictation, you should give it a try. It's improved greatly over the years!

### Checklist Updates

From time to time, we make updates to our Inspection App checklists. Following is a summary of a few of the recent changes:

We updated our **Aerial Boom Lifts** and **Scissor Lifts** categories in our Construction checklists to reflect the newly released ANSI standards. Added some new questions to the categories and replaced nomenclature for Aerial Lifts and Boom Lifts to **Mobile Equipment Work Platforms (MEWP's)**.

We added new category called **Stilts** to our **Construction 1926** checklist.

We added a new **Office Safety** Checklist that references the **CalOSHA** General Industry standards.

As with all of our checklists, you have the option to turn on or off categories and questions for each of our checklists.

[Click here](#) for a complete list of our checklists that come standard with our app.

### Incident App Update

We're currently working on several updates to our **Incident App**. These new updates will include the option to document Vehicle Incidents, Property Incidents and General Liability Incidents.

We're also working on adding the TCIR, DART and LWDII rates to the Incident Dashboard page with a comparison to industry average for your NAICS group. Lastly, we're building an Incident Investigation tool that will include a 'corrective action' feature.

We're still a few weeks away from pushing out these updates, so please be patient...the wait will be worth it! We'll keep you posted!
