

SAFETY REPORTS

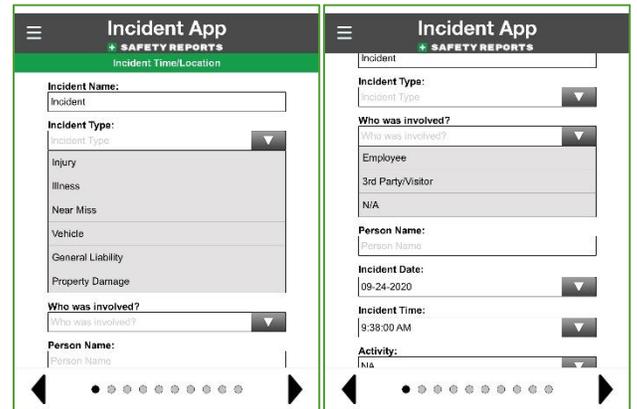

Safety Incidents User Guide (Injuries and Illnesses)

Thank you for choosing Safety Reports! These instructions are intended for those using the mobile version of our Safety Incident app. If you haven't already done so, please download the app ([Android](#)) ([Apple](#)) to get started. The Incident app is compatible with both smartphones and tablets. Our app is also accessible from your computer via our [website](#).

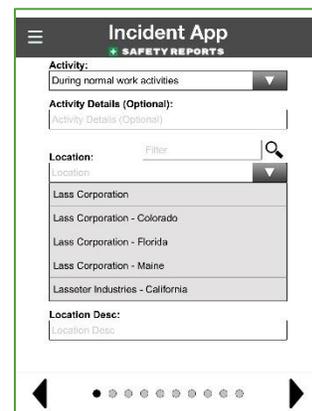

Use your credentials to sign into the app from the Settings tab. After sign-on, past incidents will be shown on the incident home screen. Color-coding allows you to see which have been submitted, and which are in progress. Use the green “Start New Incident” button to create a new incident.

Add an incident name, then choose details about the incident from several drop-down menus. Incident Name and Incident Type are required, but others may be useful. Types include Injury, Illness, Near Miss, Vehicle, General Liability and Property Damage. Incidents can be recorded for Employees or 3rd parties.

Choose from among locations, if they were pre-filled by your administrator, these may be the same as ‘Companies’ if you also use Safety Inspection. Otherwise use text to enter the location.

If recording employee-related incidents, the 'Activity' drop down is helpful to describe what this may fall under for reporting, (normal activity versus overtime for example).

Incident App
+ SAFETY REPORTS

Incident Date: 09-24-2020

Incident Time: 9:38:00 AM

Activity:

- NA
- Entering/Leaving work
- During normal work activities
- During meal period
- During break
- Working overtime

Activity Details (Optional):
Activity Details (Optional)

Note: When all drop downs have been selected, for some incident types you may be able to Geo-Tag. When you've completed a section, use the black arrow keys at the bottom to advance to the next section of the Incident, or back to the previous.

This screen will appear in all incident types. Use the fields provided to describe what led up to the incident, and a narrative about the incident itself. This second field becomes the Incident Description on the report.

Incident App
+ SAFETY REPORTS

Incident Activity/Effects

What led up to the incident?
[Text Input Field]

Describe what happened:
[Text Input Field]

Note: Some accounts may have specially-created field(s) which appear below the incident description fields shown above, if these are required to submit an incident, a small asterisk * will be shown next to the field.

Injuries and Illnesses have the same functional entry method, see the following.

Choose the type of Injury (or Illness) from the options provided.

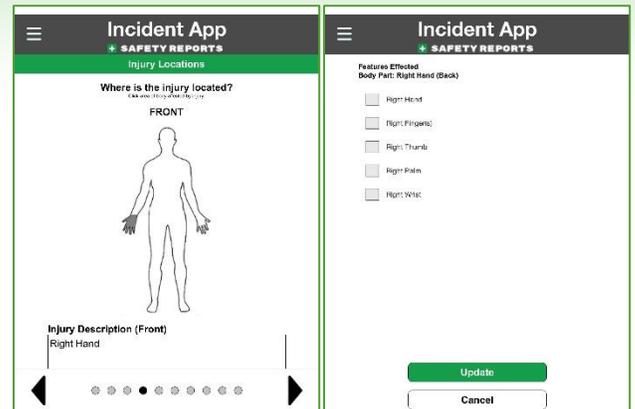

Incident App
+ SAFETY REPORTS

Incident Injuries

What type of injuries occurred?

- Abrasion/scrape
- Amputation
- Broken bone
- Bruise/Contusion
- Burn (heat)
- Burn (chemical)
- Concussion to the head
- Crushing injury
- Cut, laceration, puncture
- Fall
- Irritation (eye, skin, etc.)
- Sprain, strain

Choose the injured portion, or area of the body affected by illness using the diagrams. Keep in mind the front diagram will have sides reversed, like looking in a mirror. An area of the body (hand/lower arm in the example) may allow you to be more specific using check boxes on the following screen, (thumb, palm etc. in the example).

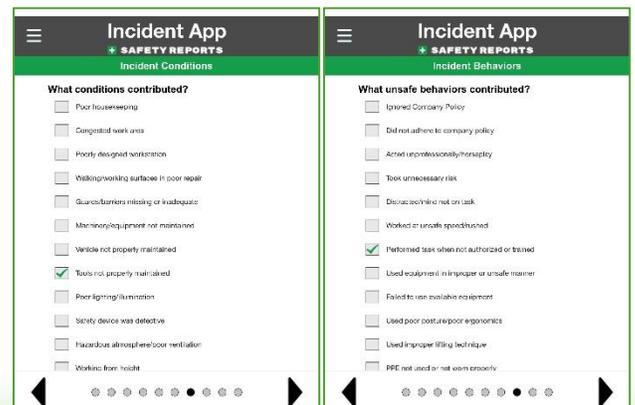

Note: choosing both the 'front' and 'rear' of a body part (right hand in the example above) on the diagram results in 2 injuries being reported on the web admin site. Large scale injuries such as circumferential burns, through-and-through penetrating trauma, long lacerations etc. may be called only one 'injury' by your own internal policy; but if marked on multiple parts of the body the system will consider them more than one.

Enter treatment details, if known on the following screen.

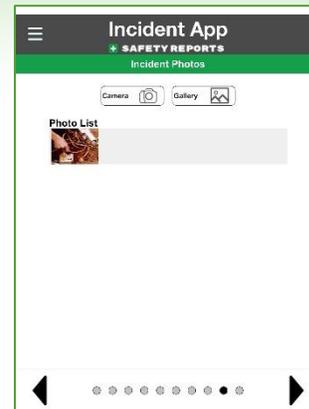

Note: treatment details can be added by an administrator after the fact, either as part of the process for creating a new OSHA first report form or for other recordkeeping.

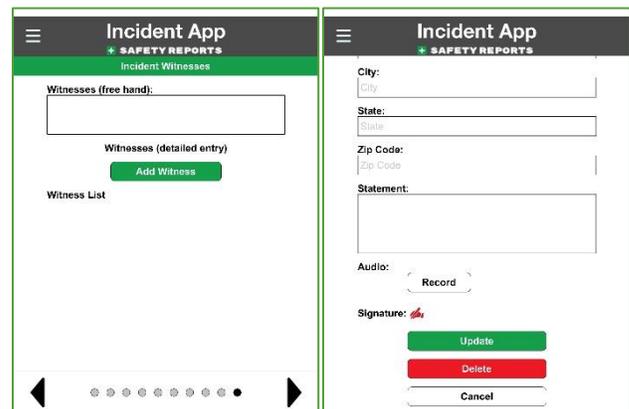

Choose from among Contributing Conditions and Behaviors as applicable (these may be custom to your organization, or from our templated options).

Include any photos of the incident. You can launch the camera to take photos here or use the Gallery function to retrieve photos of the incident you may have already taken with your mobile device.

If there were witnesses to the incident, choose the green 'Add Witness' button on the following screen. Enter their information on the screens provided, an audio recording of their statement can be saved as part of the incident, along with their signature.
